### **Scientel Wireless, LLC Makes Entrepreneur Magazine's Hot 100 List**

Entrepreneur recognizes Scientel Wireless, LLC as a company that understands the true, measurable potential of Municipal Broadband Wireless in the global marketplace, and sees them emerging as front runners in this competitive market.

Lombard, Illinois June 5, 2006 -- The way Scientel Wireless, LLC (Scientel) is making heads turn in the Municipal Wireless industry will likely prompt market watchers to recall the once glittery days of the late 90's, when anything Internet was deemed oh-so-hot. All hype aside, as evidence of their growing, well-deserved buzz, Entrepreneur magazine's June 2006 "Hot-100" issue selected Lombard's Scientel Wireless (#36) as one of the fastest-growing new businesses in America.

Entrepreneur is a monthly publication offering information and providing resources for growing businesses. For its 12th annual "Hot 100", Entrepreneur observed companies they believe are breaking out of the pack this year, and awarded the most noteworthy new businesses based on revenue, growth and success. These companies are no more than five years old, but have annual sales in excess of \$1 million.

Co-founded in 2005 by Nelson C. Santos and Larry J. Dietrick, Scientel evolved in response to the need for accountability and quantifiable results in the municipal and broadband wireless industry. Scientel develops relationships with global brands and corporations to design and engineer true municipal broadband networking solutions that are truly municipal wide and not just pilots or proof of concept projects. Having several city wide network deployment experiences, Scientel is clearly a prominent leader in the industry.

With a knack for innovation and a creative vision for new technologies that leads to measurable and sustainable results, Scientel represents the renewed spirit of broadband.

"The Municipal Wireless industry is ripe for innovation, standardization, and accountability. With that in mind," says Nelson C. Santos, Vice President of Business Development for Scientel Motive, "our products and services are aimed to provide longevity in the customers expected life cycles of these networks and applications." The company's President, Larry J. Dietrick, adds, "We want to remain on the bleeding edge of technology for Wireless Broadband, so we can provide our clients with quality results that raise the bar by exceeding industry norms."

Entrepreneur recognizes Scientel as a company that understands the true, measurable potential of Municipal Wireless Broadband marketplace, and sees them emerging as front runners in this competitive market. "We are a sales-driven, customer focused agency. We recognized early the importance of managing customer expectation and building a reputable list of projects," says Dietrick. "Our products and services are used to enhance Public Safety, reduce digital divide, improve and increase broadband service, facilitate wireless technology use for residents and businesses and to create a seamless wireless infrastructure throughout the city or coverage area."

## ***Press Release – June 5<sup>th</sup>, 2006***

With their ability to continue to build successful municipal broadband networks and putting them work for clients seeking to reap the benefits of properly engineered and design Wireless Broadband Systems, Scientel appears poised for a “hot” 2006, and more.
